

ACME CLOUD INC.
Vendor Security and Compliance Statement
Confidential

1. Incident Notification

Acme Cloud maintains formally defined criteria for notifying a client during an incident that might impact the security of their data or systems. A Security Incident is any confirmed event that actually or potentially jeopardizes the confidentiality, integrity, or availability of customer data or systems.

Notification SLA: Affected customers are notified within 24 hours of incident confirmation. Status updates are provided at least every 24 hours until resolution. Critical incidents impacting availability may include an initial notification within 1 hour of confirmation.

2. Third-Party Processing of Personal Information

Yes. Personal information is transmitted, processed, stored, and disclosed to subprocessors retained by Acme Cloud. Third parties include Amazon Web Services (AWS) for infrastructure hosting and backups, Google Workspace for corporate email and collaboration, Stripe for payment processing, and Datadog for monitoring. These parties process data under written Data Processing Agreements and confidentiality obligations. Acme Cloud does not sell personal information.

3. Cloud Providers

Acme Cloud relies on Amazon Web Services (AWS) as the primary cloud provider and Google Cloud Platform (GCP) for selected analytics workloads.

4. Data Center Locations

The primary data center location/region of the underlying cloud infrastructure used to host the service(s) is AWS us-east-1 (Northern Virginia, USA). Backup and disaster recovery copies are stored in AWS us-west-2 (Oregon, USA). Google Cloud analytics workloads run in us-central1.

5. Monitoring

The following are performed as part of the monitoring process for the service:

- Application Performance Monitoring (APM): Yes. Implemented with Datadog APM on all production services.
- End User Monitoring (EUM): Yes. Real-user monitoring is enabled for the web application.
- Digital Experience Monitoring (DEM): No. DEM is not currently part of the standard monitoring process.
